Testimonial to the Executive Master Infrastructure Project Finance (IPF)

Module : Modeling

<https://ecoledesponts.fr/en/advanced-master-infrastructure-project-finance>

"My favorite module from the Infrastructure Project Finance Executive Master is the so-called "modeling" module.

The purpose of this module is quite ambitious, as other modules of the IPF master are too, but this one touches upon a very key aspect of project finance. The modeling courses are successively provided by numerous top-level professionals with very strong expertise in this field, typically working at advisory firms or at infrastructure funds.

There is very little theory: you will learn by making models on many concrete case studies from real projects like for example windfarms, solar plants, biomass power generators, port concessions or toll roads.

After only a few hours, you will be able to build a simplified model which will already be a great achievement: In fact, at the end, when assets and liabilities balance and cashflows nicely populate over several decades, it seems magical!

The module is coordinated by Antoine Arduin from DIF Capital Partners, a very skilled teacher. Even if you've never worked intensively with Excel and don't know how to write a macro, you'll eventually manage to create your own models and understand the more complex ones.

Finally, I would like to thank Clive Gallery, head of the IPF Master, my classmates (most of whom are between 25 and 35 years old) and all the professionals/lecturers who make this program worth its weight in gold ! "
